

Prompt Interface

Free-form request

task, labels, priority,

environment constraints

Example: low light + speed

Parser + Resolver

Typed schema extraction

synonym / label grounding

augmentation policy

model-family selection

Output: `pipeline_config.json`

Training Factory

Classification or detection

dataset loaders + transforms

ImageNet initialization

checkpoint + metrics

Output: `best_model.pt`

Evaluation + Export

clean / corrupted benchmarks

CPU latency, smoke tests

ONNX conversion + metadata

Markdown report generation

Outputs: `model.onnx`, `report`

Prompt-conditioned handoff chain implemented end to end.
